

Automate your draft beer system, and take control of your profit margins. The wave of the future for bars and restaurants.

DraftChek

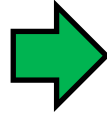

Draft Beer Monitoring System

What you can monitor:

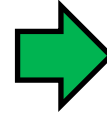

- Glycol bath temp
- Glycol return temp
- Glycol strength
- Glycol pump flow rate
- Cooler fluid temp
- Cooler liquid temp
- Gas pressure

Beverage Management starts at the taps

Collect real-time data online

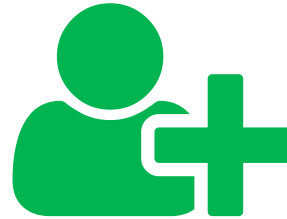

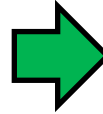

...and monitor in multiple locations

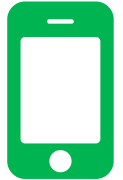

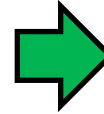

DraftChek provides reporting and analysis

DraftChek provides lifetime data warehousing

Manage user access levels

Select how to receive all data: SMS/Email/PDA Alerts

System can be purchased or rented.

DraftChek Basic System includes 1 Comnode (cellular connection and power for 3 hubs), 1 Hub (16 sensor ports and 1 ambient temperature sensor).

DraftChek is real-time telemetry for remote beer systems. Complete control at your fingertips and accurate to 0.10oz. Know immediately where there's a problem... temperature drop, fluctuations in flow rate, status of pressure and seals, and more.
